

A MODEL FOR VALUING **SUBDIVISION DEVELOPMENT LAND**

Eleventh Annual Conference.

Pacific-Rim Real Estate Society (PRRES) Conference

University of Melbourne, Australia, January 2005

Te Kunenga ki Pürehuroa

METHODOLOGY

 DISCOUNTED CASHFLOW AND HYPOTHETICAL SUBDIVISION (Hyposub) BUDGET FORMULA METHODOLOGY

Authors

- Evan Gamby Professor, Department Finance Banking and Property, Albany Campus Massey University
- Paul Bendall Manager Technical Services Group, ANZ Bank New Zealand
- Allan Smee Department Finance Banking and Property, Turitea Campus, Massey University

Abstract Pt.1

The total return required to compensate an investor for undertaking land development involves risk/return tradeoff analysis. The problem is that in the absence of a volume of comparable sales, existing methods-particularly the hypothetical subdivisional budget formula method or hyposub-- concentrate on the determination of residual land value, utilising subjectively derived single figure profit and risk and/or discount rates.

Abstract Pt. 2

 The investor/developer determines price based on expected return, both total and equity; the financier is interested in risk exposure during the subdivision process; the valuer assesses residual value

Abstract Pt. 3

 The authors identified the need for a model that compares the results of the hyposub method with Discounted Cash Flow (DCF) analysis and addresses the risk/return tradeoff. The authors postulate that a comparative hyposub/DCF model that allows for sensitivity analysis should provide more useful results for investors, valuers and financiers.

Abstract Pt. 4

- The hyposub is the traditional shortcut method used by valuers. DCF should better reflect the perceived risk exposure at various stages of the development process. Sensitivity analysis assists risk assessment and focuses attention back on the risk adjusted return being the driving determinant of land value.
- The model has been built on a standard excel framework for ease of use. No comparable models have been identified in New Zealand, Australia or the Asian region..

KEYWORDS

Discounted Cash Flow, land development, subdivision, valuation subdivision model, hypothetical subdivisional budget formula, hyposub, risk/return trade-off, sensitivity analysis.

MODEL REQUIREMENT

- Identification of a need for a model for Valuers Financiers and Investors.
- Multiple requirements of Valuers, Financiers, Investors and Students
- Unsatisfactory individual time consuming non standardised existing models
- Static 'Hyposub' model
- Poor presentation of existing model outputs
- Requirement for alternate levels of sophistication
- Sensitivity analysis
- Risk Return capabilities
- Relative ease of operation
- Graph presentation
- Capability of further development

TARGET END USERS

- Valuers (Appraisers) of Real Estate
- Financiers both prime lenders and mezzanine financiers
- Students of property at undergraduate and post graduate levels
- Land developers/Investors
- Surveying Engineers

OPERATION FRAMEWORK

- Designed for excel users
- Visual
- Video capabilities
- Audio support
- Tutorial Workbook
- Development of CD rom training program

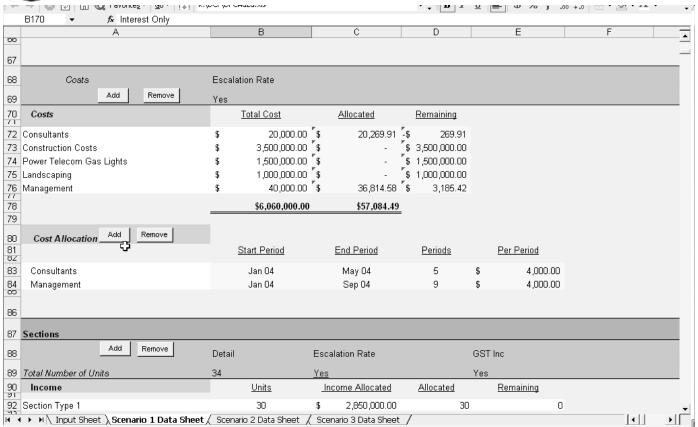

PRESENTATION TO PRRES

- The PRRES presentation will be in excel, and include
- Video clips
- · Excel demonstration of model to date
- Invite suggestions of modifications and improvements to existing model

TESTING THE PRODUCT

- Test by Masters Students on land development projects in Auckland S1, 2005
- Tested by leading property Financiers S1 2005
- Model refinements and modificiation S2 2005
- Completion of programming and presentation S2 2005
- Available to market in 2005/2006

PRRES 'THE PROMISE' 2004

- Multi-period explicit discount rate models developed by Gamby and others are time consuming, non standardised and tedious.
- The Gamby principle of multi period discounting has been adopted as a realistic determinant of probable market price
- Current valuation models do not include risk/return tradeoff features for financiers and developers.
- The need will be met in 2005 following modification to the model presented at PRRES January 2005
